OverviewFuture plans and investmentsInstalled capacity for electricity generationNuclear powerFossil gas powerElectricity consumptionElectricity transmission and distributionFinancial aspectsThere are numerous investment opportunities in the sector as Armenia has significant potential for electricity production from renewable energy sources such as hydropower, wind, solar, geothermal, and biogas. Armenia also has a large solar energy potential. Compared with other countries, the average annual energy flow is higher; therefore, there is large interest in this energy sector.

Armenia produced 0.79 mln toe electricity in 2022, of which by nuclear power plant (31.0%), natural gas fired thermal power plants (42.2%), hydro power plants (21%) and wind solar plants (5.7%). Although Armenia's energy mix is dominated by gas, the electricity mix is well diversified in comparison to many of its neighbors.

Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.
