Algeria primarily relies on fossil fuels for energy generation, with nearly 97% of its electricity capacity derived from these sources. The country has seen significant growth in its electricity capacity, which nearly doubled from 2011 to 2020, mainly due to the addition of more efficient natural gas-fired and combined-cycle gas turbine plants. However, Algeria is also aiming to increase its renewable energy capacity to 15 GW by 2035, starting with a solicitation for bids to i...
