

This study investigated three scenarios based on the existing microgrid's characteristics: conventional standalone diesel generators, PV/diesel without battery storage and PV/diesel with a battery storage system which are the main technologies used for off-grid rural electrification in Burkina Faso.

T. T Guingane et al, Photovoltaic System Connected to the Grid without Battery Storage as a Solution to Electricity Problems in Burkina Faso. International Journal of Engineering Research. 2017, Volume No.6, Issue No, ISSN:2319-6890. ... Burkina-Faso. American Journal of Energy Research. 2024, Vol. 12 No. 4, 70-76 DOI: ...

Like wind power, solar energy is intermittent and only feeds the grid during the day. To solve this problem, Burkina Faso wants to direct some of the funding to battery-based electricity storage systems that will meet demand after sunset.

Ouagadougou, Burkina Faso, October 8, 2021-- Burkina Faso could drastically increase the use of renewable energy in its power mix by developing battery storage solutions through public private partnerships, according to a roadmap supported by IFC.

This paper deals with a key solution for power outages problem experienced by many African countries and this through grid-connected photovoltaic (PV) systems with batteries storage. African grids are characterized by an insufficient power supply and frequent interruptions.

Under this agreement, IFC will assess the economic benefits of storage to integrate solar capacities to the grid and decrease the overall generation costs, review the country's legal and regulatory frameworks and compare private and public storage project development and financing models.

In Burkina Faso, the government intends to accelerate the deployment of battery-based electricity storage systems in the coming years. Ouagadougou will rely on public-private partnerships (PPP). This approach is already supported by several development partners.

This study aims to perform a techno-economic feasibility analysis of the integration of solar PV together with two storage options, viz. Li-ion batteries, and hypothetical PHS for electrification of Burkina Faso through different configurations.

This study aims to perform a techno-economic feasibility analysis of the integration of solar PV together with two storage options, viz. Li-ion batteries, and hypothetical ...
