At that point, the island was given its current name of Bouvet Island ("Bouvet's" in Norwegian). In 1930, following resolution of a dispute with the United Kingdom over claiming rights, it was declared a Norwegian dependency. In 1971, it was designated a nature reserve.

How does wind affect Bouvet?

Diatoms (tiny algae) that live at the surface of the ocean are whipped up in sea spray. The windier it is, the more concentrated their presence will be in the layers of snow settling on Bouvet. And it's not just a record of winds that Dr Thomas's team can extract.

The machine is designed to operate right on the shoreline, generating 0.5 MW of power for local or island communities, thus playing a crucial part in enabling Islay to release itself from reliance on fossil fuels, and ultimately become self-sufficient in renewable energy.

These systems can help facilitate the integration of variable renewable energy sources (which is particularly complex on islands due to limited grid infrastructure), maintain grid stability, and provide intraday flexibility -
