

# Can a disinfection cabinet be used as a cupboard for storing dishes

How does a microbiological safety cabinet work?

Filtered air is continuously supplied to the cabinet and the exhaust air is treated to prevent release of micro-organisms. In both Class I and II microbiological safety cabinets the inward airflow protects the user by minimising the escape of any airborne particulate contamination generated within the cabinet.

What substances should be placed in a COSHH cupboard?

Substances such as cleaning products, pool chemicals, caustic soda, and bleach are all examples of the types of substance that need to be placed in a COSHH cupboard. The cupboard needs to lock, and have a spill capture mechanism. For general cabinets like this a health hazard warning sign is normally used.

How do I work safely in a biological safety cabinet (BSC)?

Follow these guidelines for working safely in a biological safety cabinet (BSC). Improper use of a biological safety cabinet can result in contaminated cultures and expose workers to infectious organisms. When used correctly, a curtain of room air enters the grill at the front edge of the BSC work surface and acts as a protective barrier.

Can corrosive chemicals be stored together in a safety cabinet?

Corrosive chemicals such as acid and caustics cannot be stored together in a safety cabinet for corrosive substances. Acids and caustics can react rapidly and with the evolution of heat. Hazardous chemicals in glass containers must be stored in cabinets that provide extra protection for glass containers.

Which industries need to store hazardous substances in a cabinet?
