What types of electric motors are used in solar power applications?

There are four basic types of electric motors used in solar power applications: AC induction, stepper, and permanent magnet DC brushed and brushless. Jonathan Doyle, Application Engineer with Dunkermotor, shared some insight into motors and drives in solar applications.

Could a solar powered electric motor be used in a home?

This model for a solar-powered electric motor could be used in an industrial setting or for household appliances, such as refrigerators and fans. Mohanty says he hopes to see such a system someday used in electric vehicles, which would eliminate the need to plug the EV into the main power grid.

Can solar powered motors be used in industrial machines?

Such solar-powered motors could someday be used in industrial machines, household appliances, and even electric cars. Bismit Mohanty, the lead author on the study, says the focus of the model was on boosting the overall efficiency of the system, to obtain the highest output of the motor for the solar power available.

Can a solar powered motor be used in a car?

The system relies on AI to optimize the solar array's output and operate the motor at 88 percent efficiency; real-world DC electric motors have efficiencies of 75 to 80 percent. Such solar-powered motors could someday be used in industrial machines, household appliances, and even electric cars.

How does a solar motor work?

According to the model, when it's sunny, the solar array generates enough power to operate the motor, storing excess energy in the battery. When it's overcast, the motor runs off the battery. The motor's regenerative braking system charges the battery whenever the brakes are applied, turning kinetic energy into electrical energy.

How solar PV technology can be used to generate electricity?

The capability of electricity generation from solar PV technology is versatile from milliwatt to gigawatt [27, 28, 29]. Additionally, solar PV technology can also be used with electric, hybrid and autonomous vehicles either directly integrating PV panel with these vehicles or indirectly through PV power station to recharge these vehicles.
