

# Community microgrid enablement program Cameroon

Does your community need a microgrid enablement program?

If your community needs critical facility energy resilience for extreme weather, Public Safety Power Shutoff events, or other events, PG&E's Community Microgrid Enablement Program can help.

What is the community microgrid enablement program (CMEP)?

The Community Microgrid Enablement Program (CMEP) is a program that provides technical and financial support to community microgrid projects with the greatest resilience needs. It is mentioned alongside the Remote Grid Program, which replaces traditional wires to small loads at the edges of the distribution system in high wildfire threat areas with standalone energy systems.

What is the community microgrid initiative?

The Community Microgrid Initiative is designed to achieve Community Microgrid demonstration projects that prove that local renewables connected to the distribution grid can provide at least 25% of the total electric energy consumed while maintaining grid reliability and power quality.

Does a community microgrid need utility cooperation?

Deploying a true Community Microgrid requires utility cooperation, which has been slow to come. The Redwood Coast Airport Microgrid (RCAM), being staged in Northern California in partnership with Pacific Gas & Electric (PG&E), provides an example of what can be done with utility cooperation.

How do Community Microgrids work?

Community Microgrids provide communities unparalleled economic, environmental, and resilience benefits. We have the technology to widely deploy Community Microgrids, but we need to advance policies and market mechanisms to unleash this untapped market. Deploying a true Community Microgrid requires utility cooperation, which has been slow to come.

Who should be involved in a community microgrid initiative?

For a Community Microgrid Initiative to be successful, all key community stakeholders must be aligned. These key stakeholders include property owners, residents, philanthropic funders, financiers, solution providers, utilities, policymakers, and municipalities.

Community Microgrid Enablement Program Overview CMEP Objective: To partner with communities in their resilience efforts by supporting community-driven resilience for critical facilities and vulnerable customer groups.

RCAM will provide lessons that can inform future Community Microgrid projects, such as a potential microgrid tariff. To achieve our Community Microgrid vision, the Clean Coalition is designing and staging

# Community microgrid enablement program Cameroon

numerous Solar Microgrids at critical community facilities, which will be ready to connect to larger Community Microgrids when they are ...

Local and tribal governments developing community microgrids serving multiple critical facilities in outage prone areas are eligible for the program. PG& E will provide technical support to communities, including project scoping, project design guidance, and a dedicated PG& E project management office to provide support for projects. grants

For the Cameroon project, Morua Power will develop a plan for sustainable business development, focusing on the communities' specific resources and strengths. The aim is to connect the communities to broader markets and increase their cash flow and opportunities.

If your community is seeking energy resilience for extreme weather, Public Safety Power Shutoff events or other outages, PG& E's community microgrid programs can help. Through financial and technical support, the Community Microgrid Enablement Program (CMEP) and Microgrid Incentive Program (MIP) can help you take your community's energy ...

RCAM will provide lessons that can inform future Community Microgrid projects, such as a potential microgrid tariff. To achieve our Community Microgrid vision, the Clean Coalition is designing and staging numerous Solar Microgrids at ...

What is a Community Microgrid? A community microgrid consists of a group of interconnected customers and distributed energy resources within clearly defined electrical boundaries that can disconnect from and reconnect to the grid. These microgrids are typically designed to serve the portions of communities that include community resources, such as:

The Community Microgrid Enablement Program (CMEP) will provide a suite of tools, information and cost offsets to support eligible communities seeking critical facility resilience solutions. CMEP targets high-priority multi-customer microgrids serving vulnerable customers and critical facilities.

o Enhanced tools and information to support microgrid development (2020 -2021) o Cost Offsets -Up to \$27M per year for distribution grid upgrades to enable community-driven multi-customer microgrids (2021) o Tariffs and Operational Agreements to enable use of PG& E's grid for community-driven multi-customer microgrids (2021) 4

For the Cameroon project, Morua Power will develop a plan for sustainable business development, focusing on the communities' specific resources and strengths. The aim is to connect the communities to broader ...

The purpose of this Community Microgrid Technical Best Practices Guide (Guide) is to provide information to help development teams understand the key technical concepts and approved means and methods for
