

What is energy in Croatia?

Energy in Croatia describes energy and electricity production, consumption and import in Croatia. As of 2023, Croatia imported about 54.54% of the total energy consumed annually: 78.34% of its oil demand, 74.48% of its gas and 100% of its coal needs.

How can Croatia become energy-independent and sustainable?

In order to become energy-independent and sustainable, Croatia counts on its abundant renewable energy resources. In February 2020, the Croatian government adopted a new Energy Strategy for the period until 2030, with an outlook through 2050.

What is Croatia's energy strategy?

In February 2020, the Croatian government adopted a new Energy Strategy for the period until 2030, with an outlook through 2050. The Strategy includes a wide range of energy policy initiatives that will improve energy security, increase energy efficiency, lower dependence on fossil fuels, increase local production and increase renewable resources.

How much energy does Croatia import?

Croatia imports about 54.54% of the total energy consumed annually: 74.48% of natural gas, 78.34% of oil and petroleum products, and 100% of its solid fossil fuel needs. Croatia also co-owns the Krsko nuclear reactor in Slovenia, which is included in its energy mix as imported electricity.

Could Croatia have been a regional oil and gas import hub?

Croatia could have already assumed a much bigger role as a regional oil and gas import hub had it not delayed and scaled back the construction of its LNG terminal for a decade, said Andr s Simonyi, an energy expert at the Atlantic Council's Global Energy Center. "The Croats are very late," Simonyi said.

Is Croatia a Good Energy Gateway?

"Croatia has a good chance to be the energy gateway for a number of neighbouring central European countries in the current energy geopolitical situation and difficulties of energy imports from Russia," said Igor Dekanic, a professor at the geology and mining faculty of Zagreb university.

Croatia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

scale renewable energy production and developing energy communities, mainly by streamlining procedures for administrative authorisation and permits. Further upgrade electricity transmission and distribution grids and invest in electricity storage. Step up action to reduce energy demand by

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided
