

What energy sources does El Salvador use?

El Salvador is increasingly turning to indigenous renewable sources of energy such as hydropower, biomass, solar PV and geothermal energy. In 2019, more than two-thirds of the country's total energy supply came from imported fossil fuels.

What role does natural gas play in El Salvador's energy supply?

Natural gas does not play a role in El Salvador's energy supply. Prioritizing renewables is of utmost priority to El Salvador from an energy security basis, as they do not have any domestic oil, gas or coal supply and are dependent on imported fossil fuels from their partners.

Who owns El Salvador's electricity?

CEL is an independent, public electric utility in charge of developing, conserving, managing, and using the energy resources of El Salvador. Clean energy is generated in four hydropower plants located at different points in the Lempa River basin. ETESAL is El Salvador's transmission system owner.

What is El Salvador's new energy policy 2020-2050?

The new National Energy Policy 2020-2050 aims to diversify El Salvador's energy mix and take advantage of the country's significant renewable energy resource potential. At the same time, the policy highlights the need to reduce dependence on fossil fuels and mitigate the impact of climate change.

Will El Salvador get a new PPA for renewables?

This project already holds a PPA, which was awarded during the first energy bidding process in El Salvador back in 2012. It will also cover a large part of the distribution companies' demand. Following the plant coming online, the allocation of new PPAs for renewables will likely depend on the growth of electricity demand and future energy policy.

Does El Salvador need a regional energy strategy?

El Salvador benefited greatly from regional energy integration and plays an active role in the MER. The country should therefore incorporate the Regional Energy Strategy 2030 in its national long-term planning efforts. This is in line with the country's overall development strategy and assures the participation of both public and private sectors.

The new National Energy Policy 2020-2050 aims to continue developing the country's renewable energy potential, which can stimulate local commerce and industry, help reduce electricity tariffs and improve people's welfare.

El Salvador: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen

country across ...

The project is delivering approximately 30% of the country's energy demand with clean power and has modified the Salvadoran energy matrix by incorporating natural gas for generation and other uses, reducing the country's reliance on diesel and heavy fuel oil-fired power generation.

Natural gas does not play a role in El Salvador's energy supply. Prioritizing renewables is of utmost priority to El Salvador from an energy security basis, as they do not have any domestic oil, gas or coal supply and are dependent on ...
