

Estonia solar system inverter for home

Are solar panels a good investment in Estonia?

Solar panels are a great possibility for investment, which ensures a steady future for decades. Is there really enough sun in Estonia? Solar energy is the only renewable, free of charge and inexhaustible form of energy. Every day more sunshine reaches the earth that we take advantage of.

Is there enough sunshine in Estonia?

Common myths that say there is not enough sunshine in Estonia are not true. For example, solar systems efficiency can be easily compared with systems placed in Northern Germany. The fact that our climate is slightly cooler is an advantage over Germany's larger daily dose of sunshine.

Which direction should solar panels be placed in Germany?

The fact that our climate is slightly cooler is an advantage over Germany's larger daily dose of sunshine. For the best results it is important to place solar panels in direction to the South, however it is also possible to direct the system towards East or West, depending on the needs of daily energy supply. Why is a solar park profitable?

These solar distributors are the ones who deal with homeowners who want to go solar, businesses that work with the solar industry and solar installers who offer solar system services to both residential and commercial customers.

Solar park or a PV-system is a combination of solar panels, an inverter, a mounting system and the connection between the last two. It is possible to install both, on-grid and off-grid systems. An off-grid system is more beneficial in places where there are no grid connections and where there is no other option than to save the energy produces.

ePäike is a home solar power station that can be mounted in any building or on any open surface. As a result of system using of solar energy, the monthly cost of purchased electricity is reduced significantly. The system consists of an inverter, an electric cabinet, a set of 14 solar panels and materials required for installation.

The grid-tie inverter was engineered at ElectroAir factory in Tallinn. Its purpose is to convert the solar energy into a line current. The product works in parallel with the network and can be used both in home single-phase and in industrial 3-phase networks.
