Upon closing, the portfolio had an average asset age of two years and an estimated useful life of 30 years. ...

An energy vortex is a specific location on Earth which acts as a swirling center of energy, containing more earthly energy than any normal place would. One common belief in regard to energy vortexes is that they exist at the intersections of ley lines or the random lines of natural energy that make up the Earth's electromagnetic field.

Karim Moussa, CEO of Vortex Energy: "Ignis has an extraordinary team, with a visionary plan to create an international renewable IPP in the coming years. Vortex Energy will support Ignis to achieve its objectives and work to deliver its significant value creation potential."

Lithuania is a net energy importer. In 2019 Lithuania used around 11.4 TWh of electricity after producing just 3.6 TWh. [1] Systematic diversification of energy imports and resources is Lithuania's key energy strategy. [2] Long-term aims were defined in the National Energy Independence strategy in 2012 by Lietuvos Seimas. [3]
