Description: Guinea Bissau has seen some progress in building its energy infrastructure. However, vast areas of Guinea Bissau remain literally in the dark. Rural electrification has reached dozens of communities through the expansion of mini-grids and the projected construction of the national grid. Download Report &#233;&#233;

An overview of the main available renewable energy technologies is given and the case of Guinea Bissau is studied. Using a software tool developed in previous works the practical case of a photovoltaic water pumping system to supply water to nonelectrified villages in isolated rural regions of Guinea Bissau is analyzed.

Guinea-Bissau has huge potential for clean energy development, but these energy resources are undeveloped due to inadequate financial, regulatory and technical capacities. Source: Guinea Bissau - Update and Extension of the Country Strategy Paper 2015-2019 to December 2021

However, access to data is often a barrier to starting energy system modelling in developing countries, thereby causing delays. Therefore, this article provides data that can be used to create a simple zero order energy system model for Guinea-Bissau, which can act as a starting point for further model development and scenario analysis.

Guinea-Bissau has one of the lowest electrification rates in Sub-Saharan Africa with only 29 percent<sup>2</sup> of the population -around 53 percent in urban areas- having access to electricity (Figure 1). Several isolated grids provide electricity throughout the country, while a
