What is energy in Hong Kong?

Energy in Hong Kong refers to the type of energy and its related infrastructure used in Hong Kong. Energy is crucial for the development of trade and industries in Hong Kong with its relatively small usable land. Hong Kong mostly imports its energy from outside or produces it through some intermediate process.

Why is energy important in Hong Kong?

Energy is crucial for the development of trade and industries in Hong Kong with its relatively small usable land. Hong Kong mostly imports its energy from outside or produces it through some intermediate process. Hong Kong meets all of its coal demand through imports.

What is the fuel mix for electricity generation in Hong Kong?

In the overall fuel mix for electricity generation in Hong Kong, natural gas dominates the fuel mix in Hong Kong, in 2020 on set-out basis, at around 48%, followed by nuclear energy and renewable energy accounted for around 28% and coal for around 24%.

How can Hong Kong reduce energy consumption?

One way to generate those would be through the introduction of an opt-out system (also known as green default) for all businesses, homeowners and tenants in Hong Kong to offset their own electricity consumption through the purchase of renewable energy certificates (REC).

Can Hong Kong achieve a low carbon energy ambition?

With almost all its energy demand met by imported supply, primarily from Mainland China, developing Hong Kong's indigenous renewable energy from offshore wind offers the potential to meet the city's low carbon ambition and, at the same time, pursue energy reliance and resilience.

Does Hong Kong have nuclear power?

Hong Kong has no indigenous supply of nuclear energy and there is no nuclear power station in the territory. However, Hong Kong has imported electricity from Mainland China from the Daya Bay Nuclear Power Plant in Shenzhen, Guangdong since 1994.
