Does gas-fired power generation cost a lot?

As the IEA's O&M data is split between different countries and regions, we have taken the data for Europe as the default comparison point between power generation methods. Gas-fired power generation is known for having relatively low O&M costs when compared to other generation methods, and the IEA's stats bear this out.

What is the cost of Operation & Maintenance (O&M) in a power plant?

Whether the energy source is fossil fuel-based, nuclear or renewable, the cost of operation and maintenance (O&M) forms an important part of a power plant's business case, a piece of the investment puzzle along with capital expenditure and fuel costs that must be balanced against life-cycle profitability, output efficiency and availability.

What is the levelised cost of a generation technology?

The levelised cost of a generation technology is the ratio of the total costs of a generic plant to the total amount of electricity expected to be generated over the plant's lifetime. Both are expressed in net present value terms. This means that future costs and outputs are discounted, when compared to costs and outputs today.

What drives O&M costs at coal-fired plants?

A major driver for O&M costs at coal-fired plants is monitoring and servicing the many moving parts involved in the generation process, including turbines and generating sets, coal yard conveyors and handling systems.

Do gas-fired power plants benefit from low fuel prices?

In the United States, gas-fired power plants benefit from the expected low fuel prices in the region, although fuel price assumptions are, in general, uncertain. Nevertheless, in terms of the LCOE of the median plant, onshore wind and utility scale solar PV are, assuming emission costs of USD 30/tCO<sub>2</sub>, the least cost options.

How much does hydroelectric power cost?

Large-scale hydroelectric power is currently significantly cheaper to operate and maintain than smaller-scale projects; the former has an average yearly O&M cost of \$53 per kW with the latter slightly higher at \$70.
