How do I build a DIY solar panel stand?

The first step when building your DIY solar panel stand is to determine the proper angle for your panels. This will depend on your location and the amount of sunlight your panels will receive. Once you have this information, you can begin designing your stands and gathering the necessary materials.

How do I Mount my solar panels?

There are multiple options for mounting your solar panels. The best option for you is most likely the flat surface on your home that receives the maximum exposure to sunlight. For irregular surfaces, you can augment your rigid solar panel array with flexible solar panels.

How to install a solar panel?

The first step is to attach the fixing bracket to the solar panel. Lay the solar panel face-down on the tarp or canvas to protect the photovoltaic surface. You want to be sure the mounting holes on the back of the panel align with the holes in the fixing bracket. Don't modify the module frame because doing so may void your manufacturer's warranty.

How do you attach a solar panel to a wall?

Mark where you want to attach your triangle brackets to the wall. Use a tape measure to make sure they're installed as far apart as your solar panel is wide. Screw the brackets to the wall, using a level to make sure they're vertical. I used two screws per bracket -- one at the top and bottom of the vertical side. Here's a video of this step:

How do you attach solar panels to a roof?

You should have a cordless drill within your toolkit to attach solar panel mounts securely to your roof. An impact driver helps by delivering the torque necessary for driving screws firmly, ensuring the panels remain steadfast. Socket toolsets allow you to tighten all nuts and bolts, securing panels against the elements.
