

# How to place photovoltaic panels safely

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

Can I install solar panels if I don't meet building regulations?

Your local authority can also apply for a Confiscation Order to take away any money you've earned with your system - so there's absolutely no benefit to installing solar panels that don't meet building regulations. It's crucial that your solar installation follows all building regulations.

Can You DIY solar panels?

It's possible to DIY solar panels with the right tools, materials, and a comprehensive understanding of the installation process. However, while homeowners can successfully set up their own solar panel systems, adhering to local building codes and safety standards is crucial to ensure a successful installation.

Can a solar panel be installed on a south-facing roof?

A solar panel will be most effective if you have a south-facing roof. This will ensure maximum sunlight reaches the panel. You will also have to make sure that your roof can support a panel, and that it has a large enough area for panel installation. Under Permitted Development Rights, you won't require formal permission to install a solar panel.

Do I need planning permission to install solar panels on my roof?

When considering the installation of solar panels on your roof, it's critical to understand if you need permission. In the UK, solar panel installations often fall under "Permitted Development," meaning you typically won't need planning permission.
