

How to transport wind turbines up the mountain

Why are wind turbine blades so difficult to transport?

Historically, transporting wind turbine blades has not been easy due to the increasing size and weight of the blades and the fact that wind farms are often located in remote and inaccessible areas.

How are wind turbines transported?

Wind turbines are not easily transported; relocating them can take up to a year of planning and ten loads. They are usually trucked to their final destination.

How much truck does it take to haul a wind turbine?

It takes a whole lot of truck. They might not look like it from 200 feet below, but industrial wind turbine blades are enormous--116 feet in their own right on GE's common 1.5-megawatt models. It's not uncommon to see semi-trucks hauling these massive turbine blades around U.S. highways, sometimes requiring a bit of tricky maneuvering.

How to install or mount a wind turbine?

To install or mount a wind turbine, you need to put together the desired configuration of the mounting system and tap the top of the wind turbine shaft above the accelerometer that is placed on the shaft. The accelerometer is placed on the shaft to record the acceleration of the initial pulse.

Do semi-trucks haul turbine blades through mountain passes?

It's not uncommon to see semi-trucks hauling these massive turbine blades around U.S. highways, sometimes requiring a bit of tricky maneuvering. But what about when you need to get the blades through mountain passes with sharply winding roads?

How many wind turbines does a wind farm have?

Considering that a wind farm can have more than 100 wind turbines, each with its own three blades, transporting these important wind giants is no easy task. Especially when many of these wind farms are located in rural areas that are difficult to access, often with narrow, winding mountain roads.

The logistics data provider Freight Waves acknowledges that wind turbine transport is difficult due its dimensions. Preparations like route planning and regulatory compliance must be completed for transport. When ...

It is certainly not an easy task to transport the blade of wind turbine, which measures 70 meters long and weighs 20 tons, to the top of a mountain. But workers in north China's Hejin City, Shanxi Province made it.

Each truck needs to carry a wind turbine blade that is 75 meters long and weighs 19 tonnes along winding mountain roads, and makes hundreds of sharp turns before completing its two-week journey.
