How do you turn on a PV inverter?

Switch the DC switch ON. If the voltage of PV arrays are higher than start up voltage, the inverter will turn on. The red LED power will light. When both the DC and the AC sides supply to the inverter, it will be ready to generate power.

Can a PV inverter run a diesel generator?

With diesel generators, the frequency of the output voltage under load is 50 Hz. For this reason, the PV inverters will in most cases supply their entire power to the stand-alone grid, even when the diesel generator is in operation.

How do you connect a solar inverter to a grid?

Switch the Grid Supply Main Switch (AC) OFF. Switch the DC Isolator OFF. Connect the inverter to the grid. Assemble PV connector and connect to the Inverter. The inverter must be grounded for safety. Two methods are provided. Connect the AC grounding cable. (See Section 3.4.3)
