

Eaton siktar på att möta energilagring och nödkraftslösningar med sina nya produktionsanläggning i Vanda utanför Helsingfors. Fabriken, som ligger nära Helsingfors-Vanda flygplats, kommer att fungera som det europeiska huvudkontoret för ...

What is HyPER? HyPER project focus on establishing a hydrogen production and storage testing platform in Central Finland. Safe and viable hydrogen production with Anion Exchange Membrane Electrolyser (AEMEL) optimized for solar and wind production and spot electricity prices.

31 likes, 0 comments - enapter on November 27, 2024: "The #HyPER project aims to bring significant contribution to Central Finland's hydrogen economy - with our #AEM Electrolysers playing a central role Central Finland, rich in biogenic CO2, currently lacks a clear hydrogen economy strategy. "Central Finland has essential elements for a successful ...

Vireon is set to construct Finland's first large-scale green hydrogen refueling station in Jyväskylä. The announcement is significant, as currently there are no H2 stations operating in Finland.

Once again, we are excited to share that we have reached a significant milestone at the Harjavalta: the mechanical completion of Finland's first eMethane production unit, which is part of P2X Solutions Green hydrogen plant in Harjavalta.
