

Currently, Jordan is looking at having 10% of its energy mix generated from renewable energy sources by the year 2020. Thus, the country is implementing a plan to generate 600MW of wind energy, and 600MW of solar energy to reach this target.

The programme is implemented by Jordan Renewable Energy and Energy Efficiency Fund (JREEEF) of the ministry. The initiative offers subsidies covering 30 per cent of the cost of solar panel systems and solar water heaters, according to a ministry statement.

Uncover the remarkable growth and benefits of solar energy in Jordan as the country embraces renewable solutions. Discover how solar power is driving sustainable development, reducing carbon emissions, and fostering energy security in Jordan's quest for a cleaner and brighter future.

Jordan is blessed with an abundance of solar energy which is evident from the annual daily average solar irradiance (average insolation intensity on a horizontal surface) ranges between 4-7 kWh/m², which is one of the highest in the world.

Utilizing Solar Energy, Powering into Green World! We are dedicated to maintaining our leadership in the renewable energy AND delivering higher efficiency to the global photovoltaic industry. We are the loyal partner of the photovoltaic industry, creating greater value for the customers' investment.

In a significant step towards promoting renewable energy adoption, the Ministry of Energy and Mineral Resources (MEMR) in Jordan has introduced an online platform for inquiries related to the subsidy program for residential solar heaters and PV systems.
