

# Location of the generator wind shield wall

Where should a standby generator be located?

The optimal location for a standby generator provides for safety and efficient operation. Consider these factors to choose a location: Safety Concerns: Locate the generator away from windows, vents, and doors to prevent the exhaust fumes, including carbon monoxide, from entering living spaces.

How far apart should a generator be from a wall?

The general rule-of-thumb is to leave 5 feet between generators and between a generator and other equipment, walls, or obstructions. AHJ's recommend that a system installer maintain the 5 foot separation wherever possible and only rely on the exceptions when absolutely necessary for a particular installation.

Where should a generator be located?

For example, most manufacturers will state that your generator should always be located outside and placed at least five feet from doors, windows, and vents, and flammable material. If the distance requirements differ between your manufacturer and local guidelines, go with the greater measurement as a safety precaution.

How close should a generator be to Windows?

A generator positioned too close to windows or any openings introduces the risk of exhaust emissions entering the house and posing a severe health risk to occupants. To mitigate this risk, building codes and manufacturers recommend a minimum distance of 5 feet from windows, doors, and other openings.

Where should a Kohler 20kW standby generator be installed?

This Kohler 20kW Standby Generator installed over gravel is at least 5 feet from the window and four feet from the home. Minimize costs by placing the home backup generator as close to the existing electrical service entrance as possible without getting too close.

Where should a generator be placed if it floods?

Elevated Ground: Choose a location where water does not pool. If your area is prone to flooding, consider an elevated stand for the generator. Once a generator floods, you'll have to replace it at your own cost. Flood damage is not covered by warranty. Elevated ground or ground that slopes away from the generator is a good choice.
