

Where can I find a guide for preservation microfilming?

National Library of Australia 1998, Guidelines for Preservation Microfilming in Australia and New Zealand, National Library, Canberra. National Preservation Office 2000, Guide to Preservation Microfilming, The Office, London.

How to produce microfilm of preservation quality?

In order to produce microfilm of preservation quality, microfilmmers must strictly follow the specifications in national and international standards. These cover requirements of all aspects of microfilming from preparation through to filming, processing and storage.

What is a microform image?

A microform is a scaled-down reproduction of a document, typically either photographic film or paper, made for the purposes of transmission, storage, reading, and printing. Microform images are commonly reduced to about 4% or 1/25 of the original document size. For special purposes, greater optical reductions may be used.

Where can I find microfilms from industry?

The ESA Archives holds some microfilms from industry in its Envisat technical documentation and master microfilm files, along with microfiches of ESA final contract reports and official blue-docs - you can see some examples in the slideshow below. We also have a microfiche reader that was capable of converting them into pdf files.

What is a microform?

Microforms Microform is a generic term used to describe formats containing microreproductions of documents and images. Microforms can be plastic film (microfilm, microfiche), paper (microcard, microprint), or a combination of the two (aperture card, a microfilm cell embedded in a punchcard).
