

The Principality of Monaco has already installed more than 2,000 square metres of solar photovoltaic panels. The Neptune building opposite the Louis II Stadium has a roof made entirely of photovoltaic panels. Photovoltaic panels can be installed on roofs, taking account of shading caused by the environment.

In Monaco, it is possible to capture the energy of the sun in two ways: using photovoltaic panels, which transform sunlight into electricity, and with thermal panels, which use the energy produced by the sun's rays to heat water.

“M.E.R. aims to make Monaco one of the first States to have 100% green electricity production capacity, equivalent to consumption in its territory,” stated Marie-Pierre Gramaglia, Minister of Public Works, the Environment and Urban Development.

By the end of 2021, M.E.R. will own 15 photovoltaic power stations. This major new initiative will increase the total power of the facilities owned by M.E.R. to 128 MWp (106 MW of photovoltaic ...

This analysis provides insights into each city/location's potential for harnessing solar energy through PV installations. [Link: Solar PV potential in Monaco by location. Solar output per kW of installed solar PV by season in Monte Carlo](#)

Monaco is also investing in solar power through enabling the purchase of electric power plants that were powered by renewables. Since 2005, Monaco has remained steadfast in its commitment to undergo sustainable development.

A giant solar power station has been inaugurated on the roof of Monaco's Grimaldi Forum, marking a significant milestone in the Principality's energy transition. Eventually, electricity generated from the station will be used to power the new eco-district.

This website is an interactive map that allows users to easily identify every roof in Monaco, its potential solar resource, the exploitable area on which photovoltaic panels could be installed, and the possible annual electricity production.

Monaco has joined forces with France to establish a large solar park, representing a significant advancement towards its sustainable energy ambitions. Situated in France, this photovoltaic park will harness solar energy to produce clean electricity for Monaco, decreasing its dependency on fossil fuels and lowering its carbon emissions

capacity, equivalent to consumption in its territory," stated Marie-Pierre Gramaglia, Minister of ...

By the end of 2021, M.E.R. will own 15 photovoltaic power stations. This major new initiative will increase the total power of the facilities owned by M.E.R. to 128 MWp (106 MW of photovoltaic power and 22 MW of wind power), together generating 184 GWh per year, or 34% of the Principality's electricity consumption.
