

New solar power system installation

How do I install my own solar panel system?

To install your own solar panel system, you must first understand such a project's legal and practical aspects. The process begins with thorough planning, from evaluating your home's compatibility for solar panel installation to understanding the technical intricacies involved with your specific situation.

Can solar panels be added to a new build?

For new builds and self-builds, you'll likely be looking at solar photovoltaic panels and/or solar hot water (solar thermal) systems. Instead of looking at options to traditional heating systems, solar panel installations can be added to new builds to improve the EPC and overall energy efficiency.

What is a DIY solar panel installation?

DIY installations allow you to customise your solar panel system to match your home's energy needs and roof layout (or perhaps even a balcony). Some professional installations may offer limited options, while a DIY approach allows for optimising panel placement, choosing specific components, and tailoring the system for maximum efficiency.

Are solar panels easy to install?

Installing solar panels is usually relatively quick and straightforward, but it's still worth getting to know all the ins and outs of how it happens. After all, considering how much solar panels cost, it makes sense to understand the process.

What is needed to install solar panels on UK homes?

Here's a quick guide to what's needed to install solar panels on UK homes: An installer should visit to determine if the property is suitable for solar panels. They will look at the size and orientation of the roof to decide the best location and angle for installing panels.

Should you start a DIY project with solar panels?

Beginning a DIY project with solar panels like EcoFlow Solar Panels marks a significant step towards securing renewable energy for your home. To install your own solar panel system, you must first understand such a project's legal and practical aspects.
