What is a flat plate solar PV/T system?

Fig. 2. A flat plate solar PV/T system with same sized separate flat plate SWH and solar PV module. Installing photovoltaic (PV) modules can use only 10% to 15% of the incident solar energy, and they reduce the possibility of using solar thermal collectors in the limited roof-space of buildings .

What is photovoltaic thermal (pv/T)?

The Photovoltaic Thermal (PV/T) is a solar energy collector,using PV as the absorber . The present photovoltaic technology has a major inherent drawback in its inability to absorb solar radiation from the complete solar spectrum.

Does flat plate photovoltaic/thermal (pv/T) solar collector produce both thermal energy and electricity?

Flat plate photovoltaic/thermal (PV/T) solar collector produces both thermal energy and electricity simultaneously. This paper presents the state-of-the-art on flat plate PV/T collector classification,design and performance evaluation of water,air and combination of water and/or air based.

What is a liquid based flat plate solar collector?

A liquid based flat plate solar collector,constructed with mono-crystalline silicon PV cells on selective aluminium thermal absorber plateproduced higher output density than individual PV module and solar thermal collector .

What is a solar PV/T collector?

The solar PV/T collector combines the solar thermal and solar photovoltaic technology in a single unit,thereby,producing overall higher efficiency at less roof-space. Fig. 2. A flat plate solar PV/T system with same sized separate flat plate SWH and solar PV module.

What is a flat plate pv/T collector?

Flat plate PV/T collector classification. Aste et al. mentioned that, amongst all types of PV/T solar collectors, the most popular PV/T collector is the PV/T air collector; nevertheless, this type of collector has less applications compared to the water collectors. Zondag et al. has elaborated the PV/T collector types.

Equivalent circuit of PV array. The voltage-current characteristic equation of a solar cell is provided as: Module photocurrent I_{ph} : $I_{ph} = I_{sc} \left[1 - \exp \left(-\frac{V}{V_{oc}} \right) \right]$; $h = \left[\frac{V}{V_{oc}} \right]$; I_{sc} : short-circuit current; V_{oc} : open-circuit voltage; ...
