How do you disconnect a microinverter from a PV module?

Enphase AC connectors are tool-removable only. To disconnect the microinverter from the IQ Cable, insert the disconnect tool and remove the connector. Cover the PV module with an opaque cover. Using a clamp-on meter, verify there is no current flowing in the DC wires between the PV module and the microinverter.

How do I connect a microinverter to a photovoltaic system?

The DC conductors of this photovoltaic system are ungrounded and may be energized. If required, attach the Enphase DC bulkhead adaptors to the microinverters. Ensure they are fully seated. Do not reverse the adaptor connections. Connect the DC leads of each PV module to the DC input connectors of the corresponding microinverter or adapter.

How do I remove a microinverter from a PV array racking?

Maintenance is not required. Disconnect the AC by turning off the branch circuit breaker. Disconnect the AC connector of the microinverter. Cover the module with an opaque casing. Disconnect the PV module DC wire connectors from the microinverter. Remove the microinverter from the PV array racking.

Can a PV module be installed on a microinverter?

Individual PV modules can be installed in any combination of Module quantity, orientation, different type and power rate. The ground wire (PE) of the AC cable is connected to the chassis inside the microinverter. This may potentially eliminate the installation of a grounding wire (check this with local regulation).

How do I connect a microinverter to a DMU?

Plug in the DMU and follow the instructions according to its manual. The microinverters will send performance data through the power line to the DMU. The time required for all the microinverters in the system to report to the DMU will vary on the number of microinverters in the system.

How far apart should a PV module be from a microinverter?

Also allow 1.3 cm (1/2") between the back of the PV module and the top of the microinverter. For vertical mount, also maintain > 30 cm (12") clearance from the edges of the PV module to protect the microinverter from direct exposure to rain, UV, and other harmful weather events.
