

Photovoltaic panel mortise and tenon structure

Can a mortise and tenon structure triboelectric nanogenerator harvest energy?

This paper proposes a new layered structure for energy harvesting in a mortise and tenon structure triboelectric nanogenerator (MT-TENG). The structure's design is inspired by the traditional Chinese mortise and tenon architectural style (Fig. S1).

What is a mortise and tenon structure?

The structure's design is inspired by the traditional Chinese mortise and tenon architectural style (Fig. S1). With the discarded paper is used as the mortise structure to play a supporting role, the discarded polypropylene (PP) material is used as the tenon structure. The two are combined to construct the mortise and tenon structure frame.

Can mortise-tenon technology reduce recombination in a perovskite solar cell?

Chinese researchers have used Mortise-Tenon technology to connect the perovskite absorber with the hole transport layer in a perovskite solar cell. They say that this reduces non-radiative recombination, while improving the cell's open-circuit voltage and fill factor.

Do disorder crystallization and unbalanced charge extraction limit the performance of perovskite solar cells?

Disorder crystallization of perovskite and unbalanced charge extraction limit the performance of perovskite solar cells. Here, the authors develop self-polymerizing additive to form monolithic perovskite grains with mortise-tenon structure, achieving efficiency over 24% and long device stability.

What is a PP tenon device made of?

The device is mainly composed of discarded PP material and paper. PP material as tenon structure, paper as the mortise structure, PP material interspersed in the paper, and the two combined to form a mortise and tenon structure. The electrode layer is composed of conductive copper tape and Polydimethylsiloxane (PDMS) film.

Can a perovskite solar cell improve performance?

Researchers at Nanjing Tech University in China have designed a perovskite solar cell that uses a Mortise-Tenon (M-T) structure to create a large-contact area between the perovskite absorber and the hole transport layer (HTL). They claim that this contributes to enhancing cell performance and durability.

Researchers at Nanjing Tech University in China have designed a perovskite solar cell that uses a Mortise-Tenon (M-T) structure to create a large-contact area between the perovskite absorber...

Wedging the end of a tenon reinforces the joint, closing small gaps and providing a tight fit. With through-tenons, this is also done for decorative purposes. Tusk. An extended tenon comes through the mortise, and at the ...

b) A protruding mortise joint with a concave tenon with interlock to offer a connecting function, in ancient Chinese Lu Ban lock architecture. c) A novel Janus evaporator ...

connotation and craftsmanship spirit behind it, and the mortise and tenon structure form reflects the hard work and practical aesthetic pursuit of the Chinese nation[1-2]. 2. Morphological ...

Mortise and tenon structure cultural and creative products are those centered on the traditional mortise and tenon joinery. These products incorporate the cultural elements and creative ...

The mortise-tenon structure requires advanced processing of mortise and tenon, which is slightly more complicated than traditional origami. But the mortise-tenon structure can ...

Compared to traditional honeycomb structures, the mortise-and-tenon configuration achieves enhanced acoustic characteristics at mid to low frequencies by merely adjusting the positions ...

Mortise and tenon joints are widely used in the building and furniture industries because of their excellent mechanical and eco-friendly properties. In real-life cases, there are ...

With an increase in the cyclic amplitude, the tenon pull-out of the joint gradually increased (Fig. 8a), the inelastic deformation perpendicular to the wood grain was observed at ...

This study was aimed at examining the mechanical performance of mortise and tenon joints reinforced with slot-in bamboo scrimber plates. 27 full-scale specimens were manufactured with engineered wood and bamboo ...
