

How can I Optimize my solar panel placement?

By leveraging tools like SunCalc, Google Maps, and compass apps, you can effectively map the sun's direction and optimize your solar panel placement for maximum efficiency. Sun direction maps are essential for optimal solar panel placement.

What is the orientation of a solar panel?

The orientation of a solar panel is also called its azimuth, which is the horizontal angle compared to true north (0 degrees). North-facing rooftops are traditionally considered unsuitable for solar panels in the UK, but this isn't necessarily the case anymore - solar panel technology has come a long way in the past couple of decades.

How do I align my solar panels correctly?

True-East Orientation: These apps help you find true-east, which is crucial for accurately aligning your solar panels. By leveraging tools like SunCalc, Google Maps, and compass apps, you can effectively map the sun's direction and optimize your solar panel placement for maximum efficiency.

How do I choose a solar panel?

Reading the Map: Key elements include azimuth angle (compass direction) and elevation angle (Sun's height). These help determine the best placement and tilt for solar panels. **Seasonal Variations:** Sun paths vary seasonally; understanding these changes helps adjust solar panel angles throughout the year to maximize energy capture.

Where should solar panels be positioned in the UK?

But here in the UK, which gets less than half the annual sunshine of South Africa (1,387 hours versus SA's 3,103), you need to put in a little more planning, and position your solar panels to capture maximum sunlight. The best direction for solar panels is the same wherever you are in the UK: facing south, and pitched at 40 degrees.

What angle should solar panels be installed in London?

For instance, the latitude of London is 51.5 degrees, but the optimum angle for solar panels in this city is 36 degrees. However, in the case of most rooftop solar panel installations, the angle of the solar panels is determined by the angle of the roof - there isn't much you can do to change it.
