

Is geothermal energy used in electricity production in Slovakia?

At the end of 2022, geothermal energy is not used in electricity production, but only to a limited degree for heat production and recreational use. This makes it the only RES-E technology in Slovakia without any installed capacity. Slovakia's overall (probable) geothermal potential is calculated at around 6,200 MWt.

How is energy used in Slovak Republic?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Will NECP be able to harvest Slovakia's solar potential?

The current Slovakia's NECP projects a solar PV target of 1,200 MW cumulatively installed in 2030. While the NECP does not specify the character of these capacities, it is to be assumed that both ground-mounted and rooftop PV will play a role in harvesting Slovakia's solar potential.

Hence, this scenario requires a clear action of the Slovak Government and a preparation of an enabling investment environment that would allow for a rise of new solar PV capacities. The aforementioned future development scenarios for solar PV in Slovakia are illustrated in Graph 3 provided below.

Slovakia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Slovakia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...

In 2022 Slovakia sought to reduce its reliance on natural gas from Russia who was supplying 81% in 2020. In order to lower reliance, a gas pipeline interconnector with neighbouring Poland was completed by August 2022 and put into operation in a bilateral opening ceremony on ...

From 2024, following the completion of two new nuclear reactors, Slovakia will return to being a net exporter of electricity. Slovnaft is the largest oil refinery in Slovakia. In 2022 Slovakia sought to reduce its reliance on oil from Russia. Slovenský plynárenský priemysel (Slovak Gas Industry) is the main natural gas supplier in Slova...

Countries that rely heavily on imported energy may be vulnerable to supply disruption from external events such as the Covid-19 pandemic and the war in Ukraine. In countries that export large amounts of energy, falling energy prices can also cause major economic shocks.

measure is identified in one of the following intervention fields (i.e. 029 - Renewable energy: solar; 032 - Other renewable energy (including geothermal energy); 033 - Smart Energy Systems (including smart grids and ICT systems) and related storage.) this amount was deducted from the respective categories (i.e. renewables and grids).

ENGIE is a global leader in the energy sector, specializing in providing low-carbon energy and services. With a focus on sustainability and innovation, ENGIE operates across multiple areas, including power generation, natural gas, and energy efficiency services.
