

Croatia's energy efficiency obligation scheme, entered into force in 2014 and extended in 2021, is the cornerstone of the country energy efficiency strategy and is expected to deliver 36 ktoe of energy savings in 2022(1). A public call for grants was launched for ...

Croatia wants to cut its CO<sub>2</sub> emissions by 45% by 2030 and to abandon coal by 2033. But the transition to a low-carbon economy won't be easy, requiring major investments in new energy infrastructure and increased ...

Croatia to meet renewable energy target of 36.4% of total consumption by 2030. GlobalData's report, "Croatia Power Market, 2022 - 2035", reveals that onshore wind power capacity in Croatia is expected to be 1.99 ...

In order to become energy-independent and sustainable, Croatia counts on its abundant renewable energy resources. In February 2020, the Croatian government adopted a new Energy Strategy for the period until 2030, with an outlook through 2050. The Strategy includes a wide range of energy policy initiatives that will improve energy security ...

The Croatian renewable energy market is characterized by a small number of producers of technology a larger number of distributors of international technologies; no specialized R&D institution for solar or bio-based energy and a small number of innovative start-ups working on technology or smart grids. There are only a few

Croatia wants to cut its CO<sub>2</sub> emissions by 45% by 2030 and to abandon coal by 2033. But the transition to a low-carbon economy won't be easy, requiring major investments in new energy infrastructure and increased renewable energy resources. To achieve its goal, Croatia set up a 2030 National Energy and Climate Plan.

scale renewable energy production and developing energy communities, mainly by streamlining procedures for administrative authorisation and permits. Further upgrade electricity transmission and distribution grids and invest in electricity storage. Step up action to reduce energy demand by

Croatia's energy efficiency obligation scheme, entered into force in 2014 and extended in 2021, is the cornerstone of the country energy efficiency strategy and is expected to deliver 36 ktoe of ...

Croatia to meet renewable energy target of 36.4% of total consumption by 2030. GlobalData's report, "Croatia Power Market, 2022 - 2035", reveals that onshore wind power capacity in Croatia is expected to be 1.99 GW by 2030, exceeding its target by 0.39 GW, while its solar photovoltaic (PV) capacity will be 0.77 GW, which meets its target.

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not

included. This can be ...

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings.
