

# Requirements for installing photovoltaic panels on flat roofs

Do you need planning permission for a flat roof solar panel?

you don't have space for a 0.5-1m border between your solar panel system and the edge of your roof. If any of the above apply, you will need to seek planning permission. How do flat roof solar panels work? As with normal solar panels, flat roof solar panels convert sunlight into electricity.

Can a flat roof solar system be installed on a domestic property?

Whilst flat roof solar systems are more commonly used on commercial buildings, they can certainly be fitted onto domestic properties too. Read on to find out more about flat roof solar, and how in many cases it is actually better than normal on-roof solar! How do Solar Panel Systems on a Flat Roof Work?

How far apart should solar panels be on a flat roof?

However, as a general rule of thumb, you need about one metre between each row of solar panels on a flat roof. Building and safety regulations also require a minimum distance of 0.5-1m between the solar panels and the edge of the roof. Where is the best place to put solar panels on a roof?

Can you put solar panels on a flat roof?

Not only can you put solar panels on a flat roof, they're actually easier to install than on a sloped roof. This is because solar panel installers have much more room to stand and manoeuvre the panels on a flat roof. Flat roof solar panels can be a great way to use otherwise wasted space, while saving hundreds of pounds a year on your energy bills.

How much does a solar panel weigh on a flat roof?

As mentioned earlier, solar panels on a flat roof need a heavy ballasted mounting system to stay secure in high winds. And that ballast can make a solar panel up to five times heavier than a typical non-ballasted panel. A ballasted solar panel can weigh around 100kg, whereas a non-ballasted solar panel is only about 20kg.

What angle should solar panels be installed on a flat roof?

The ideal pitch for a Solar Panel is around 30 degrees off the horizontal. Simply because this allows the panels to gain more exposure from the sun throughout the entire day. When installing Solar panels on a flat roof, this is easily achieved. As the Solar Panels are installed onto a bracket which tilts the panel to around 30 degrees.

Best angle for solar panels on flat roofs. As we say, the fact you get to choose the angle your panels sit on a flat roof is a huge advantage. The optimum angle for a solar panel is between 30 and 40 degrees. Roofs in the ...

So why does it cost less to install panels on flat roofs than pitched roofs? Well, the answer is simple. The labour costs for flat roof solar panel installations is lower than a pitched roof. Approximately 10% of the cost
