

Why should we invest in Romanian solar?

Econergy identified Romania as an important European renewables player at the end of the 2010s and has become a leading developer and investor in Romanian PV. We have learned where Romania's bold commitments create opportunity, where growth is delayed, and how Romania is weathering current international challenges. Solar regulation

How many largescale solar projects are there in Romania?

As of the latest data available, there are over 880 large-scale PV projects in Romania, boasting a cumulative capacity of approximately 46,600 MW. This impressive number showcases the country's commitment to harnessing solar energy as a clean and sustainable source of power.

Does Romania have a solar PV project in 2023?

Overview of solar PV developments Following a period of lull, Romania has achieved in 2023 a significant milestone in its renewable energy journey - over 1 GW of new solar capacity installed in one year between distributed generation and utility scale projects.

Where can solar energy be developed in Romania?

Arad (5.40 GW) and Dolj (5.39 GW) are the most promising locations, but counties such as Giurgiu (4), Bihor (3.8), Teleorman (2.6), Timis (2.3) and Dambovită (2.3) also stand out in this respect. This geographical diversity highlights the potential for solar energy development across Romania.

How much energy will Romania have by 2030?

The new plan aims for 36% of Romania's energy to come from renewables by 2030 - higher than the figure allocated it by the European Commission - with 8.3 GW of solar and 7.6 GW of wind. Bucharest has committed to phase out coal by 2032.

How much solar energy does Romania need?

In the context of the European ambitions, Romania would need to aim for 44.4% RES, meaning 11.1 GW of solar - 6.1 GW for utility-scale and 5 GW for rooftop PV. Drivers for solar growth The last two years have been marked by significant legislative changes that underpinned the development of the Romanian PV sector.

4 ???&#0183; Polish solar developer and independent power producer (IPP) R.Power SA said today it has launched the construction of its first photovoltaic (PV) portfolio in Romania. Image by: ...

Eight companies and consortiums are participating in the tenders for the design, construction and operation of four solar parks on land belonging to Romania's state-owned coal miner and power plant operator ...

5 ???&#0183; The two parties previously collaborated on Romania's first renewable energy auction, which

included 500MW of solar PV and 1GW of onshore wind. The EBRD supported a contract for difference (CfD) ...

5 ???&#0183; The two parties previously collaborated on Romania's first renewable energy auction, which included 500MW of solar PV and 1GW of onshore wind. The EBRD supported a ...

The European Commission (EC) today launched two in-depth investigations under the Foreign Subsidies Regulation, which became effective in July last year, for two bidders in a Romanian tender for the delivery of a 110 ...

The European Commission announced that two Chinese-owned renewable energy developers have pulled out from a public tender to build a solar photovoltaic (PV) park with a planned capacity of 455 MW in Romania.

The European Commission (EC) today launched two in-depth investigations under the Foreign Subsidies Regulation, which became effective in July last year, for two bidders in a Romanian tender for the delivery of a 110-MW solar park.

23.9%, slightly below the target value for Romania for 2020 of 24%, according to official European data published by Eurostat: EU renewable energy policies have helped reduce the cost of photovoltaics by 82% over the past decade, making it one of the most competitive sources of electricity in the EU. Thus, by 2023, in terms of investments in

4 ???&#0183; Polish solar developer and independent power producer (IPP) R.Power SA said today it has launched the construction of its first photovoltaic (PV) portfolio in Romania. Image by: R.Power. The project involves the installation of four solar parks with ...

With an average of 1,900 to 2,400 annual sunlight hours, Romania has significant natural potential for solar PV development. Yet, the country has not set ambitious targets for renewable energy sources, aiming for only 30.7% of its final energy consumption to come from RES by 2030. For solar, this translates into an objective of 5.05 GW, which

Eight companies and consortiums are participating in the tenders for the design, construction and operation of four solar parks on land belonging to Romania's state-owned coal miner and power plant operator Complexul Energetic Oltenia. The government has bailed out the troubled utility using European funds.

The new plan aims for 36% of Romania's energy to come from renewables by 2030 - higher than the figure allocated it by the European Commission - with 8.3 GW of solar and 7.6 GW of wind.
