Skelion was born in July 2011 after two years of development. It is a plugin for Google SketchUp that allows you to, among other things, insert solar panels on surfaces automatically. Why did you build Skelion? Skelion was developed to automate the design of solar systems using Google SketchUp.

How does skelion calculate solar energy?

Using TMY hourly meteorological data Skelion calculates the percentage of solar energy available for each panel taking into account near shadings. Export your ground power plant or your solar system to PVSYST. Skelion links 3D model with PV calculators of NREL and European JRC to generate a PV energy report.

How to insert solar panels in a roof?

Specially developed to insert solar panels in any roof. Create your own 3d Component and insert directly in 3D model or customize the existent database of solar panels. Solar obstructions can be projected over the roof with two different criterias (distance - height or solstice shadow) to determine the area that accomplish the criteria.
