

Abstract Large-scale integration of photovoltaics (PV) into electricity grids is challenged by the intermittent nature of solar power. Sky image-based solar forecasting has been recognized as ...

This blog post describes the methodology to estimate solar power generation by all controlled premises with solar panels within a specific utility. Using this utility's latitude and longitude, ...

Orientation: Ideally, your shed roof should face south or southwest to maximise sun exposure.; Angle: The optimal tilt angle for solar panels in most regions is around 30 degrees. This angle helps maximise the amount of sunlight that the ...

The dataset contains three years (2017-2019) of quality-controlled down-sampled sky images and PV power generation data that is ready-to-use for short-term solar forecasting using deep learning. In addition, to support the flexibility in ...
