Cuba says it was generating only enough electricity to cover about one-sixth of peak demand late on Wednesday, hours after its national grid collapsed leaving millions without power.

It was the latest in a string of nationwide blackouts of Cuba's antiquated and increasingly frail power generation system. This year, Cuba's grid fell into near-total disarray, stressed by fuel ...

Below we will address several aspects, interconnected with each other, that portray the difficult panorama of the Cuban Electric Power System and explain as a whole the crisis that it is going through, the scene and catalyst of its recent collapse.

The National Electric System (SEN) faces far-reaching technical challenges that threaten the economic and social development of Cuba. After more than forty years of operation without capital maintenance, the basic thermoelectric generation infrastructure, as well as its distribution capacity, have collapsed.
