

Are solar panels a viable alternative energy source in Syria?

As an option that seemed to be one of the best alternative energy sources in Syria, reinforced by the absence of fuel, the spread of solar panels began in most regions, respectively, years ago, amid "government" support and adoption of this trend.

Where does solar energy come from in Syria?

The use of solar energy spreads from northwestern Syria, which started relying on solar power around 2016, passing through areas in the north-east, ending with the areas under the control of the Syrian regime, which directed a clear trend to generate electricity through them, not only in large industrial facilities but even in homes.

Is Syria a good country for solar energy?

Regarding wind energy, which is the second source of energy, Syria is not considered one of the countries that have a sufficient amount of wind throughout the year to produce electricity, and therefore the solar energy situation is regarded as the best in it.

How much does a solar panel cost in Syria?

The price of a panel capable of charging a small battery and lighting a room is about 80,000 Syrian pounds, regardless of its quality, while the monthly salary of her husband, who is an employee in an agricultural establishment affiliated with the Syrian regime, is about 110,000 Syrian pounds.

Where are solar panels located in Syria?

Solar panels, big and small, old and new, are seemingly everywhere in Idlib Province along Syria's border with Turkey, rigged up in twos and threes on the roofs and balconies of apartment buildings, perched atop refugee tents and mounted near farms and factories on huge platforms that rotate to follow the sun across the sky.

Are solar panels a better option than losing electricity in Syria?

According to an opinion poll conducted by Enab Baladi, a number of Syrians residing in various governorates considered that alternative energy through solar panels is a better option than losing electricity despite its high costs and regardless of the controlling parties.

In 2017, solar panels in Syria began to supplant generators as locals' main source of electricity. However, locals did not use solar panels out of ecological concern. People just needed an affordable source of electricity because the fuel to power generators became prohibitively expensive.

Can solar energy be relied upon in the future of Syria? According to a study published in the Middle East Studies Center (MESC) in September 2021, the use of renewable energies declined even before the outbreak of the Syrian revolution.

Promising Solar Projects - Solar Boom in Syria. In the war-torn nation of Syria, solar power has emerged as a promising solution that offers citizens clean energy. There were numerous projects implemented in Syria, covering the southern province of Sweida and the northwestern province of Tartous.

The Syria Solar project aims to equip hospitals in Syria with solar systems to ensure that the local population can get medical care around the clock - even when conventional energy supplies are scarce and the power goes down.

As Syria moves forwards, a new energy network will have to be practically built up from the ground. While this is a colossal task, it also brings new opportunities regarding which energy sources it will be reliant on. But Syria's energy priorities remain ...

Since 2021, the Aga Khan Foundation in Syria has supported over 3,400 households to access solar-powered water pumps. These pumps, which replace diesel generators, are used for irrigation.

The recent installation of solar panels is bringing about positive changes in the Syrian Arab Republic. The use of renewable energy sources, such as solar power, is improving access to clean water and health care services for the residents.

The hospital is one of the key hospitals in Northern Syria, specializing in orthopaedics. UOSSM installed 300 solar photovoltaic panels and 12 inverters with a capacity of 90 kWp DC power, 216 batteries capable of storing 540 kWh of power, and advanced data control systems.

In 2017, solar panels in Syria began to supplant generators as locals' main source of electricity. However, locals did not use solar panels out of ecological concern. People just needed an affordable source of electricity ...
