

Solar panels will benefit in a few years

How long do solar panels last?

Solar panels have a life span of around 25 years or more, but this can vary depending on what they're made from and when they were installed. According to experts, some of the latest models of solar panels that are being installed today could have a useful life of 40 years or more.

What are the benefits of solar panels?

A final solar panel benefit to consider is that installing them in your home is much faster and easier than you might think. They can be installed almost anywhere on your property as long as the spot gets lots of sunlight all throughout the year.

How much do solar panels save?

How much you'll save will depend on a number of factors including the type and size of solar panel array you have, your home's location, your energy consumption and, of course, the weather.

Is it worth getting solar panels in the UK?

It's definitely worth getting solar panels in the UK. The UK isn't especially sunny, but it receives more than enough daylight to save households hundreds of pounds per year on their electricity bills - and what you don't use, you can sell to the grid.

Can solar power save you money?

Solar electricity is a clean, renewable energy source. A typical home solar panel system could save around one tonne of carbon per year, depending on where you live in the UK. That's the equivalent of driving 3,600 miles, or from London to Bristol 30 times. Export the electricity you can't use yourself and get paid for it.

Are solar panels a good idea?

cheaper bills for years to come. Reduce your carbon footprint By harnessing low carbon solar electricity, a typical home solar panel system could save around 800kg of carbon a year depending on where you live in the UK. This makes solar a great way to cut your carbon footprint. New solar installations more than do
