

For individuals, the government has had a programme in place since 2008 offering benefits to those who choose to put solar panels on their dwellings, and as of 2017, there has been an online site that shows residents ...

The second aspect of the presentation focused on the establishment of a Government/SMEG company. The aim is to invest in renewable electricity production assets outside Monaco.

This website is an interactive map that allows users to easily identify every roof in Monaco, its potential solar resource, the exploitable area on which photovoltaic panels could be installed, and the possible annual electricity production.

This tool enables owners, managing agents and private individuals to access data quickly to help them decide whether to install solar panels on the roof of their building. For more information on the scheme, the steps to be taken and grant applications, see:

If you are interested in building a photovoltaic facility in Monaco, we suggest that you download the document setting out the procedures and steps to follow, as well as details of the regulatory context :

If you are interested in building a photovoltaic facility in Monaco, we suggest that you download the document setting out the procedures and steps to follow, as well as details of the ...

In June 2017, the Government also published an online solar resource map, which can be accessed by any Internet user and provides information on the solar PV production capacity of every roof in Monaco ().

For individuals, the government has had a programme in place since 2008 offering benefits to those who choose to put solar panels on their dwellings, and as of 2017, there has been an online site that shows residents the photovoltaic capacity of every roof in Monaco.

The solar resource map identifies building locations using the database belonging to the Principality of Monaco's Urban Planning Office. The available aerial photographs are updated approximately every three years.

In Monaco, it is possible to capture the energy of the sun in two ways: using photovoltaic panels, which transform sunlight into electricity, and with thermal panels, which use the energy produced by the sun's rays to heat water.

In line with this objective, Monaco Energies Renouvelables has just acquired eight photovoltaic parks, with a

Solar rooftop gov in Monaco

total production capacity of 39 MW_{peak}, located in seven Departments in the south of France.
