

# Solar support manufacturer charges

How much do solar panels cost?

The price of a typical 3.5 kilowatt-peak PV solar panel system is about £7,000. Based on the Energy Saving Trust's figures, it could take someone living in the middle of the country, in a typical home, anywhere between 12 and 17 years to recoup the costs of installing panels, based on current Energy Price Cap rates.

How many solar panels can a modular system accommodate?

Scalable: the Modular system accommodates arrays of 4 panels up to megawatt scale! Compatible: Solarport accommodates your preferences, fitting all standard sizes of panel, so you don't have to change from your favourite or familiar products to use the system.

What types of solar panel mounting systems are available?

The manufacturers we provide are designed to offer reliable solar panel mounting structures for residential, commercial, and utility-scale projects. There are solutions available for flat roofs, pitched roofs, ground mounted and roof flashings. Solar mounting systems provide the structural support needed to sustain solar panels.

Why should solarport build a supply chain in the UK?

Bolstering supply chains within the UK for developers and installers is paramount to solar PV success. By building localised facilities across the nation for manufacture and design, Solarport is ensuring that the hassle and cost of unreliable supply chains is a thing of the past.

Who makes the best solar mounting system?

Mounting. Schletter. With well over 50 years of experience, Schletter is one of the world's largest manufacturers of solar mounting systems. Outstanding quality is an integral part of Schletter's sustainability approach.

Why do you need a solar panel mounting system?

Their mounting systems are lightweight, durable, and easy to attach. As a result, solar panel installation becomes more convenient and efficient. With over 15 years of experience and more than 7 GWP installed capacity with their systems, they are a leading player, operating worldwide.
