

This Master's Degree project has been performed on behalf of Vanuatu Renewable Energy and Power Association. The purpose of the project was to suggest the design of stand-alone renewable power supply systems on Futuna Island in the Republic of Vanuatu. Futuna is the easternmost island in Vanuatu with a population of about 400 people.

What Is a Photovoltaic System? A photovoltaic (PV) system is a solar power system which converts energy from the sun into electricity. A stand-alone PV system typically consists of: Solar Panels Mounting System Cabling & Wiring Regulator Battery Inverter Load

- specific challenges for stand-alone power systems on isolated islands include: developing suitable financing, long term management, O& M plus designing tariff structures that are sustainable and supported by local communities and other stakeholders. Load growth forecast allowance is also a key design challenge for

The installed solar PV system is a stand-alone 230/400 VAC 50Hz solar micro-grid combined with 48V batteries operating 24 hours and 7 days a week. The solar PV micro-grid system provides ...

Design of Stand Alone Renewable Power Supply Systems on Futuna Island, Vanuatu Solar Stand-Alone Power and Backup Power Supply Stand-Alone Hybrid Generation System Based on Renewable Energy

This Master's Degree project has been performed on behalf of Vanuatu Renewable Energy and Power

Association. The purpose of the project was to suggest the design of stand-alone renewable power supp ...

Due to the effect of Cyclone Pam in 2015, Vanuatu's Tanna Island has suffered insufficiency of energy services because of the extensive damage to the electricity provision system, including to stand-alone photovoltaic and hydropower systems for public and private purposes.
