

What is a microfiche / microfilm reader?

Microfiche: a sheet of microfilm containing multiple images in a grid pattern. Microfilm: fine grain, high-resolution photographic film capable of recording images. Microfilm /microfiche readers: equipment used to read microforms and whose primary components include a lens, a light source, and a viewing screen.

Where are microfilm images recorded?

The microfilm images are recorded in the emulsion layer of the microfilm. Fading: The loss in density of photographic images. File format: Set of structural conventions that define a wrapper, formatted data, and embedded metadata, and that can be followed to represent images, audiovisual waveforms, texts, etc., in a digital object.

What is a microfilm carrier?

Carriage: The table or stage on a unitized microfilm, micrographic or microform reader or reproduction device that holds the microfilm, micrographic or microform. Carrier: A device used to hold microfilm, micrographic or microform in place on a viewer, reader, reader /printer or reader /scanner or viewer /scanner.

What are the features of a microfilmed image?

Rotation: Images on film can be placed sideways or upside down. Rotation is the act of turning the image 90°;, 180°;, or 270°; so that the image can be easily viewed and read. Sharpening: This is a filter that will increase the sharpness of microfilmed images. Images that were originally filmed out of focus can be blurry or fuzzy.

What is the difference between microfilm and microfiche?

Microfilm is a roll film, and microfiche is a sheet film: either may contain negative or positive images, but negatives are more common. A microcard, like any photo print, is a photosensitive paper card, while a microprint is simply ink printed on a card. An aperture card is a microfilm image or cell mounted in a punch card.

What is a microfilm reel?

Microfilm is a roll or spool of film with sequential frames of images. These film reels look similar to rolls of movie films. Microfilm rolls come in two standard sizes: 16mm and 35mm. The images in these rolls can be master copies, duplicates, positives, or negatives. Proper storage of microfilms is a necessity to protect the collection.
