

How many solar panels will float on a lake in Noord-Brabant?

The 13,400 solar panels of the Amer floating PV project will float on a lake near the Amer power plant in Geertruidenberg, Noord-Brabant. RWE intends to begin construction on the project in August, with commissioning expected by the end of this year. Upon completion, the floating PV project will have an installed capacity of 6.1MW at peak.

Could distributed energy resources boost the deployment of renewables on islands?

Distributed energy resources - or small-scale energy resources that are usually situated near sites of electricity use, such as rooftop solar - could play an important role in boosting the deployment of renewables on islands, increasing the security, resilience and affordability of power systems while accelerating decarbonisation.

Why do small islands need a new energy infrastructure?

Islands - including those that make up the group known as Small Island Developing States (SIDS) - also need to upgrade their energy infrastructure so that it is resilient to higher temperatures, more frequent natural disasters and flooding related to rising sea levels.

Do IEA islands need resilient power systems?

Islands need resilient power systems more than ever. Clean energy can deliver - Analysis - IEA Islands need resilient power systems more than ever.

Why do small islands need electricity?

Electricity systems on small islands are frequently over-sized, with high reserve power generation capacity and ancillary services needed locally to respond to daily and seasonal fluctuations, such as changes in demand resulting from high and low tourist seasons.

What is the development potential for solar PV in the Caribbean?

In Caribbean SIDS alone, the development potential for solar PV is estimated at nearly 72 GW, equivalent to the installed solar PV capacity for all of Latin America in 2023.

In March, the Dutch Government announced plans to double its contribution to renewable power subsidies, from EUR2bn (\$2.17bn) to EUR4bn (\$4.34bn), as it tries to keep up with lofty European climate change goals, such as a plan to cut emissions by 55% by 2030.

Discover the Netherlands' groundbreaking solar cycle paths, an eco-friendly marvel by Wattway and BAM Royal Group. Unveiling 1,000 square meters of solar surface each, these paths aim to generate 160 MWh/year of renewable energy, contributing to the Dutch grid.

The Netherlands government has announced the allocation of EUR416.6 million (\$439.5 million) to support the construction of utility-scale batteries linked to ground-mounted solar farms and large rooftop PV systems.

Two other unique elements to the new wind farm's design are the addition of batteries and a floating offshore solar energy array. RWE partnered with a Norwegian start-up, SolarDuck, which will develop the first hybrid, offshore floating solar installation at a commercial scale.

Distributed energy resources - or small-scale energy resources that are usually situated near sites of electricity use, such as rooftop solar - could play an important role in boosting the deployment of renewables on islands, ...
