

Without further ado, I'm going to walk through three different methods for accrediting capacity from thermal power plants, including gas plants: ICAP, UCAP, and ELCC. (Hope you're ready for some acronyms!)

Unforced Capacity (UCAP) MW or Installed Capacity (ICAP) MW to represent capacity when determining capacity values? Outline o High level definition of ICAP & UCAP o Jurisdictional Review of ICAP & UCAP methodologies for Thermal Resources o Example UCAP calculation for Thermal Resources o Outage rate impact on UCAP calculations

UCAP for Intermittent Generation and Dispatchable Intermittent Resources is determined by the Transmission Provider based on historical performance, availability, and type and volume of ...

Recognizing that the new framework will result in many resources having less UCAP available to meet reliability requirements, the approved proposal provides two transition mechanisms: (1) FRR ...

Manufacturer of ultracapacitor-based power systems intended for the rapid release and storage of energy. The company's system offers reliable and adaptable power storage for a range of applications, providing industrial clients with a long-lasting source that can eliminate lead-acid and other hazardous batteries.

UCAP for Intermittent Generation and Dispatchable Intermittent Resources is determined by the Transmission Provider based on historical performance, availability, and type and volume of interconnection service.
