

Today, the demand for solar panels is growing in the country, while traditional power plants are being closed. 2021 was a special year in the history of UK solar energy. First, solar energy accounted for 25% of the global figure.

Global Photovoltaic Power Potential by Country. Specifically for United Kingdom, country factsheet has been elaborated, including the information on solar resource and PV power potential country statistics, seasonal electricity generation variations, LCOE estimates and cross-correlation with the relevant socio-economic indicators.

The average size of residential solar PV systems was estimated to be 3.25 kW, and the technical potential for residential solar PV in the United Kingdom was estimated at 41,636 MW. [30] MCS (Microgeneration Certification Scheme) claim 61,320 UK properties had solar panels installed in 2021, an increase of 71% on the previous year. [31]

In recent years, the cost of solar panels has dropped by more than 80%, making them a more accessible and affordable option for many households and businesses. As a result, solar panels are now a common sight on rooftops across the UK, particularly in the south of England where sunlight is most abundant.

For the UK, the targets have been set for 2020, which are solar panel installations for 2 million households, 24,000 commercial rooftops, and 2000 solar farms. In this context, an interesting fact is that London produces nearly as much solar power as Madrid, and the industry has huge potential for creating jobs.

Solar Energy UK represents 400+ member companies operating in the UK energy sector and beyond. Solar energy's exceptional synergies with energy storage, electric vehicles and smart grids means the industry works on the frontline of ...
