Are lithium-sulfur batteries the future of energy storage?

Lithium-sulfur (Li-S) batteries have been considered as one of the most promising energy storage devices that have the potential to deliver energy densities that supersede that of state-of-the-art lithium ion batteries.

What are lithium ion batteries?

Lithium-ion batteries (LIBs) have nowadays become outstanding rechargeable energy storage devices with rapidly expanding fields of applications due to convenient features like high energy density, high power density, long life cycle and not having memory effect.

How to improve the energy density of lithium batteries?

Strategies such as improving the active material of the cathode, improving the specific capacity of the cathode/anode material, developing lithium metal anode/anode-free lithium batteries, using solid-state electrolytes and developing new energy storage systems have been used in the research of improving the energy density of lithium batteries.

How to achieve high energy density batteries?

In order to achieve high energy density batteries, researchers have tried to develop electrode materials with higher energy density or modify existing electrode materials, improve the design of lithium batteries and develop new electrochemical energy systems, such as lithium air, lithium sulfur batteries, etc.

What are the benefits of lithium batteries?

Therefore, the use of lithium batteries almost involves various fields as shown in Fig. 1. Furthermore, the development of high energy density lithium batteries can improve the balanced supply of intermittent, fluctuating, and uncertain renewable clean energy such as tidal energy, solar energy, and wind energy.

Are Li-S batteries a good energy storage device?

Overall, Li-S batteries are promising energy storage devices but need to meet specific requirements before large-scale production. Many factors affecting their performance and fabrication, such as gravimetric energy density, volumetric energy density, cost, cycle life, shelf life and safety, need to be addressed.
