

# Vanuatu different ways of storing energy

Where does Vanuatu supply electricity?

4 Vanuatu Utilities Infrastructure supplies electricity in Luganville and Port Olry (Santo), Sola (Banks) and Talise (Maewo). 5 The Department of Energy (DoE) supplies electricity in the Tanna and Malekula concessions since mid-July 2020 and has commenced charging tariff in October of 2020.

How can Vanuatu improve energy security?

In Vanuatu there are resources to support hydro-, wind-, solar-, and geothermal-based electricity generation, which could reduce the reliance on imported diesel. In addition to improving energy security, this would contribute to a more sustainable energy supply.

Will Vanuatu continue to use the re-sat platform?

An estimate for a quote was presented to the Government of Vanuatu for continued use of the platform beyond the RE-SAT project period. "The Department of Energy is working towards achieving the goals of the National Energy Road Map (NERM) 2030, and it is timely that this project comes to fruition.

How has Vanuatu changed its energy policy?

Revision of previous policy?: The updated NERM acts as the national energy policy. Since it was launched, Vanuatu's economy and energy sector have continued to develop. External events, such as Cyclone Pam in early-2015, have also shaped how energy sector policies and priorities are conceived.

How has re-sat impacted Vanuatu?

The impact that RE-SAT has had in Vanuatu is the ability to explore potential scenarios to achieve their ambitious renewable energy targets of 100% by 2030. RE-SAT is currently used to identify potential sites for the next 5 MWp solar PV projects to be constructed in the next 2 to 3 years.

Who will benefit from re-sat Vanuatu?

"The platform will not benefit the Department of Energy only but also accessible to other Government Departments, the Regulator and Power Companies that make up the RE-SAT Vanuatu working group.

Figure 1 below shows the different types of energy sources used to produce electricity in Vanuatu during the month of November 2021. The main energy source was diesel combustion that contributed 84.3 % of the total electricity produced.

Raise awareness of the benefits of energy efficiency, the Government's commitment to increased energy efficiency through the NERM, and the actions that individuals and organisations can take; Build capacity to develop energy efficiency programmes, undertake energy audits, and maintain energy efficient equipment

new renewable energy infrastructure, from single project development through to national energy transition

The figure below shows the different types of energy sources used to produce electricity in Vanuatu during the month of July 2021. The main energy source was diesel combustion that contributed 76.3. % of the total electricity produced.

The development of renewable energy sources in Vanuatu is not only crucial for meeting the country's growing energy needs but also for fostering economic growth and reducing poverty. By reducing its reliance on imported fossil fuels, Vanuatu can reduce its vulnerability to volatile global oil prices and improve its energy security.

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Vanuatu: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Vanuatu's National Energy Road Map (NERM) 2016-2030, concluded that energy demand in Vanuatu could more than double between 2015 and 2030. This growth is expected to be driven largely by commercial and industrial sectors, followed by residential uptake. The report further estimated that by 2030, almost

The project uses 162,000 square meters of roof spaces of the three factories of Wanma and its subsidiaries to develop PV power generation, with a total installed capacity of 20MW. An energy storage project with a designed capacity of 2MW was constructed in the macromolecule factory, which can store electricity of 4,300 kWh

The development of renewable energy sources in Vanuatu is not only crucial for meeting the country's growing energy needs but also for fostering economic growth and reducing poverty. By reducing its reliance on imported fossil fuels, ...
