Can solar water heating and solar photovoltaic panels be used together?

Solar water heating and solar photovoltaic panels can be used together, provided your building has sufficient space, or independently. Solar PV panels can also be used independently to power a traditional electrical water heating system.

What is solar panel water heating?

Solar panel water heating was the first solar technology to be commercialised in the UK. This guide looks at the technology and explains how it works.

Can solar panels heat water?

Despite its benefits, using PV (photovoltaic) solar panels to heat water is typically far less efficient and cost-effective than these solar thermal systems we've discussed. That's because solar thermal collectors are generally much better at converting sunlight into heat than photovoltaic systems are at converting it to electricity.

Should you install a solar thermal system for heating hot water?

Installing a solar thermal system for heating hot water is a good move for the environment. But before you go ahead, it's essential to know all the facts so you can decide if a solar hot water system is the right choice. First, it's important to point out that there are two types of solar panel systems:

What are the benefits of solar thermal water heating panels?

So, the principal benefit of solar water heating panels is in providing hot water and installing solar thermal water heating can be cost-effective in businesses that require a lot of it. Solar thermal collectors may be flat solar thermal panels or vacuum tube solar collectors. It's these devices that collect the sun's energy for heating water.

Are solar panels a good alternative to solar water heating?

Solar PV panels offer a number of advantages beyond solar water heating. Due to their simpler design - solar photovoltaic panels have no moving parts - they need little long-term maintenance. It's also possible to use a solar panel system to heat your building's supply of hot water.
