What is a residential solar inverter?

Residential solar inverters are responsible for changing the direct current solar panels produce (solar energy) into usable energy. In UK homes, electrical devices run on alternating current, so for effective solar energy production, solar inverters are required to change solar panels' DC energy to AC so that it can be used in the home.

Do you need a solar inverter?

The best solar inverters on the market are capable of inverting a high % of the direct current (DC) they produce into alternating current (AC) that can be used in our homes. Without a solar inverter your solar panels would produce unusable energy, so having one is of vital importance to solar energy systems.
