What are the disadvantages of flat roof solar panels?

While there are a number of disadvantages to flat roof solar panels, bear in mind that most of these can be resolved by using a tilted mounting system. Panels get far dirtier over time - On a tilted roof, rainwater usually washes dirt and debris off the panels.

Are flat solar panels a good option for utility-scale solar projects?

While flat PV panels can be installed at a lower cost and with lower degradation rates, there are disadvantages to consider for utility-scale solar projects. When solar panels are installed flat to the ground with no trackers, they are not tilted to the optimal angle to absorb the most sunlight throughout the day.

How far apart should solar panels be on a flat roof?

However, as a general rule of thumb, you need about one metre between each row of solar panels on a flat roof. Building and safety regulations also require a minimum distance of 0.5-1m between the solar panels and the edge of the roof. Where is the best place to put solar panels on a roof?
