

# Working hours for replacing generator of Fengjun 5

How long does generator maintenance take?

Generator maintenance typically includes an oil and filter change, air filter replacement, spark plug replacement, and greasing of moving parts. If only a visual inspection is required then it shouldn't take more than 1 hour. A more detailed inspection may take 2-4 hours, depending on the size of the generator.

How often should a FG Wilson generator be serviced?

A more efficient generator will use less fuel, so will save you more money. For FG Wilson generator sets service intervals are typically every 500 hours for minor services and major services are at every 1000 hours. But there are routine checks that you should carry out to keep your generator running at its best when you need it. Remember!

How often should I service my Generator?

As a general guide, you should aim to perform a complete preventative inspection and service on your generator once every 6 months or every 400 hours of run time. Carrying out regular visual inspections allows you to be aware of any faults within your system, and may require service sooner than expected.

How often should a standby generator be serviced?

Standby generators are similar to diesel generators in terms of maintenance, although they generally don't need to be serviced as often. For example, the oil only needs to be changed every 1000 hours of use, and the air filter only needs to be checked every six months. What happens if I don't service my generator?

How often should you change engine oil on a generator?

Following this guide and using your user manual these steps will ensure you are getting the optimum performance from your generator year after year. Change engine oil after the first 20 hours then every 100 hours. Replace spark plug every 250 hours. Clean or replace the air filter every 250 hours. Adjust valve clearance every 500 hours.

How long does a generator inspection take?

If only a visual inspection is required then it shouldn't take more than 1 hour. A more detailed inspection may take 2-4 hours, depending on the size of the generator. The engine must be running during the generator service in order for the technician to properly inspect it.
